

### 3 Signs You're In Need of Better Backup and Disaster Recovery Services

Your business depends on data. From critical customer information to internal data passed around on the office, you need to be able to access that information quickly, easily, and efficiently. If your data disappears, a large chunk of your business goes with it. If you're wondering about your backup and recovery plan, check out these three signs that you need data backup and disaster recovery services.

**1. You're relying on on-site backups.** There are plenty of disasters that can destroy your data, especially if it's all located in a single building. Imagine what would happen if fire, flood, or natural disaster decimated your office building. Would it destroy all of your existing data as it demolished your servers and destroyed your on-site computers? If your answer is yes, it's time to look into data recovery services for your business.

**2. You have employees who work for more than one location, but your data is centrally stored.** Whether you use cloud-based data storage or store it all in company servers, it's important to know that a single office being "down" doesn't take your entire business down with it. From employees who are able to work from home on their laptops to employees in other branches of your business, you need to create data accessibility that keeps your business as functional as possible even in the event of a disaster.

**3. Your disaster recovery plan is ineffective or nonexistent.** Have you thought about what you would do in the event of a data disaster? What about natural disasters that destroy the physical office building? Chances are, you have insurance that will help pay for the physical recovery of your business, but what about your data? If you don't have a strong, focused plan in place to restore it as efficiently as possible, you're in desperate need of a better backup and data recovery service.

Your business runs on data. Isn't it time you protected it? If you're ready to set up disaster recovery services that will keep your business running through a worse case scenario, [contact us](#) today for more information, **800-944-2966**.
