

My business is small, why do I need a professional IT services company?

You're getting your business off the ground, you're finally getting into the black, and it looks like you're going to be able to pay back your investors and the bank sooner than you thought. This is fantastic. Some of your management, though, have brought up the idea of [investing in a professional IT company](#). And your only response is, "Why?"

This is a completely reasonable response. You want your company to stay in the black, not have another service you need to pay for. So we've put together 4 reasons you should consider outsourcing to a professional IT company.

Not Enough People

When it comes to running a business, we understand: you are a person of many hats. So are most of the other people in your organization. Do you really want to add the hat of "IT professional" to yourself or someone else when there are more important things to do? Things that are vital to the core of your business?

Reduces Downtime

There are two types of downtime when it comes to technology: Planned and Unplanned. Planned downtime can be scheduled around the company's time table, to maximize times when there are few or no people on the network. This means you don't lose any progress. It's preventative maintenance, it keeps things up to date and running smoothly. Unplanned downtime, on the other hand, can take hours or even days to find the cause and repair it. This leads to problems across the entire company, numerous headaches and a good chunk of revenue lost. With a professional IT company on hand, you can not only fix problems that come up, but you can prevent them.

Grows With You

Quick! What do you want your company to be five or ten years from now? Flourishing? Still growing? Dominating the market? While an IT company can't hand you the keys to the kingdom, they can give you the groundwork to move forward. One of the biggest problems with empires throughout history was that they didn't lay the groundwork before trying to grow, expand and add more people. A professional IT company grows with you, and it makes sure that your technology can handle an increase in employees and work.

Protects You From Hackers

Data hackers and ransomware are two of the biggest forces behind losses for business right now. Data hackers attack by stealing the data of your company, your employees and your clients; ransomware can lock you out of your systems entirely until you pay them or start over. Both of these are major threats, especially to small-medium businesses who don't have dedicated IT departments yet. An IT professional will take the time to secure your networks, point out potential danger spots and work with you to fix them.

If you would like to schedule a free consultation and have one of our IT professionals come out to talk to you about how to secure your company's future, we'd love to hear from you. [Contact us](#) today.
